**MyVitalData™ Announces Integration of Emergency Care Gateway™ with
Microsoft HealthVault**

*Patients Control Secure Access of Health Data with Emergency Care Providers During Health
Emergencies, Manmade and Natural Disasters*

(Newport Beach, Calif.), April 25, 2008 — Vital Data Technology, a provider of emergency medical information systems, announced today that MyVitalData™ is now available on Microsoft's HealthVault, a free Web-based platform designed to put people in control of their health data. MyVitalData is the first, and only, electronic health record that is connected to networks of hospitals, emergency care personnel and first responder organizations. The MyVitalData Emergency Care Gateway™ allows consumers to immediately deliver their vital health information to attending healthcare professionals, at the point of care in a medical emergency. This is performed through a secure, access code authentication environment that ensures only authorized emergency care personnel receive patient data.

“Providing patients with the ability to utilize the powerful HealthVault system is a key step toward making their MyVitalData health information available at the time when it's needed most--during an emergency,” said Matt D'Ambrosia, CEO of Vital Data Technology. “Through our Emergency Care Gateway, HealthVault account holders are able to access valuable information and services needed to manage any medical emergency event. Having access to the most updated health information at the point-of-care can help first responders and hospitals improve patient safety, treatment decisions and quality of care.”

Now, MyVitalData members can link their independently-created HealthVault account to their MyVitalData account, enabling the flow of the most recently entered and selected health information between the two systems – creating an integrated online tool to manage both complete and incase of emergency health records.

Vital Data Technology designed the integration to ensure that the two systems work seamlessly to automatically update an individual's health profile the instant any information is changed in either account. MyVitalData

members can also select portions of their record to link and share with multiple HealthVault accounts, allowing family members to receive automatic updates.

“MyVitalData has taken a significant step to improve the delivery of care by connecting healthcare stakeholders,” said Peter Neupert, corporate vice president of the Health Solutions Group at Microsoft. “MyVitalData goes beyond serving as a repository for health data to securely connecting critical health information to a growing network of EMS and hospital systems.”

MyVitalData is a password-protected service that is restricted to registered users—only authorized EMS personnel, hospital emergency departments and emergency management organizations. The MyVitalData Emergency Care Gateway ensures the strictest standards of patient confidentiality. Vital health data is safely and securely stored for the implicit purpose of assisting patients in the time of a health emergency and/ natural or manmade disasters.

MyVitalData integrated with HealthVault, is a new personal health technology platform that lets users gather, store and share health information online. With HealthVault, users control their own health records, so they can privately share their health information with family, friends and health care professionals, and have access to trustworthy online health management tools. More information on subscribing to MyVitalData is available at www.MyVitalData.com.

About Vital Data Technology

Vital Data Technology LLC, headquartered in Newport Beach, California, is an innovator of emergency medical information systems that share accurate and timely patient data with the right emergency care personnel at the right time. MyVitalData is the first, and only, Emergency Care Gateway, an electronic health record tethered to emergency care that connects individuals with hospitals, emergency personnel and first responders organizations to share health information in real-time. Vital Data Technology supports the Microsoft HealthVault consumer health platform. The company's solutions transform the way individuals manage and share their vital personal health information.
